

PRESS RELEASE

Panther Technologies, Inc. (**Panther**), a national environmental services firm, has joined forces with **FMC** Corporation (**FMC**), the father of Peroxygen Products for the last 70+ years, to develop and distribute several environmental products specifically designed for the Environmental Industry.

FMC is one of the largest producers of slow release oxygen products in North America. These products are used as an ideal, cost-effective alternative for soil and groundwater remediation. These products are based on a food-grade product used in the baking and oral care industries, and in the agricultural industry to promote seed germination. **Panther** is a privately held, quality-oriented environmental remediation firm offering a wide array of services, and was recently named to Entrepreneur Magazine's Hot 100 Fastest Growing Companies in the United States for the third consecutive year.

Panther serves as Regional Distributor and Service Partner for **FMC**'s new slow oxygen release product **PermeOx[®] Plus**, introduced in the 1st quarter of 2002. **PermeOx[®] Plus** is a specially formulated calcium peroxide based product, which offers significant benefits over magnesium peroxide products. This new formulation has been specifically designed by one of the world's top chemical manufacturers with a focus towards environmental applications. This formulation will provide superior oxygen release rates over longer durations, and is a cost-effective alternative for in-situ and ex-situ biological soil treatments, as well as odor abatement in municipal and wastewater applications.

For more information regarding availability of **PermeOx[®] Plus**, call us at the number below or email us at info@panthertech.com. **Panther** also offers costing for field implementation of a variety of chemical oxidation products used in large scale environmental applications.
